RELEASE VERDICT

REQUIRES REMEDIATION

Current: 73% | Target: 90% | Gap: +17%

The Revenue Management System for Kenya completed automated UI testing with 75 total test cases, achieving a 73% pass rate (55 passed, 20 failed) against a target of 90%. The 17 percentage point gap from the target indicates that the application exhibits behavioral inconsistencies in approximately one quarter of the tested UI scenarios, suggesting areas where the system's user interface components may not be responding as expected to automated interactions. The failed test cases represent specific functional areas within the revenue management workflows that require investigation to determine whether the issues stem from application defects, environmental factors, or system dependencies that may be impacting the UI layer's stability and reliability.

RECOMMENDED ACTIONS

#	Recommended Action	Due	Priority
1	Analyze the 20 failed test cases to identify common failure patterns and affected UI components	Immediate	P1
2	Prioritize investigation of high-impact revenue management features showing test failures	3 days	P1
3	Review application logs and error messages corresponding to failed test execution timestamps	5 days	P2
4	Verify environment configuration and system dependencies are correctly set for UI interactions	1 week	P2
5	Implement targeted fixes for identified defects and rerun failed test scenarios for validation	1 week	P2
6	Consider performance profiling if failures indicate timeout or response time issues in the UI layer	2 weeks	P3

KEY FINDINGS

1	Current pass rate of 73% falls 17 percentage points below the 90% target threshold
2	20 UI test failures indicate potential system instability in specific revenue management workflows
3	55 successful test executions demonstrate core functionality is operational for majority of use cases
4	27% failure rate suggests consistent reproducible issues in certain UI components or user journeys
5	Gap analysis needed to identify patterns among the 20 failed scenarios for targeted remediation
