RELEASE VERDICT

REQUIRES REMEDIATION

Current: 30% | Target: 90% | Gap: +60%

The Revenue Management System Kenya backend API testing reveals significant stability concerns with a 30% pass rate across 168 automated tests, falling substantially below the 90% target threshold. The API Automation suite shows particularly low reliability at 27.5% pass rate (22/80), while Backend Smoke Validation performs marginally better at 33% (29/88), indicating systemic issues with endpoint functionality and response handling. The widespread failures across both test suites suggest fundamental backend service issues rather than isolated defects, requiring immediate investigation into API contract compliance, service availability, and data consistency to restore system reliability to acceptable operational levels.

RECOMMENDED ACTIONS

#	Recommended Action	Due	Priority
1	Conduct immediate root cause analysis on high-failure API endpoints to identify common failure patterns	Immediate	P1
2	Review backend service logs and monitoring data to identify performance bottlenecks or service disruptions	3 days	P1
3	Validate API contract specifications against actual endpoint implementations for response format compliance	5 days	P2
4	Implement enhanced error handling and retry mechanisms for transient backend failures	1 week	P2
5	Prioritize fixing smoke test failures as these represent core system functionalities	1 week	P2
6	Establish incremental stability targets focusing first on achieving 50% pass rate before targeting 90%	2 weeks	P3

KEY FINDINGS

1	Critical backend instability with 113 of 168 automated tests failing across all test categories
2	API Automation endpoints showing 72.5% failure rate indicating severe service reliability issues
3	Smoke validation failures at 67% suggest core backend functionalities are not meeting expected behavior
4	Both test suites performing at approximately one-third of target reliability threshold
5	Pattern of failures indicates systemic backend service issues rather than isolated endpoint problems
