The Revenue Management System • Kenya automated UI validation has identified a critical functionality issue, with the single test case failing to execute successfully, resulting in a 0% pass rate against the 90% target threshold. This indicates the presence of a blocking defect or environmental condition preventing the system from completing the expected user workflow. The failure suggests that either a core revenue management function is not responding as designed, or there may be an integration point or dependency that requires immediate attention to restore the system to a testable state.

RECOMMENDED ACTIONS

#	Recommended Action	Due	Priority
1	Perform immediate triage of the failed test to identify the specific failure point in the revenue workflow	Immediate	P1
2	Verify system dependencies and external service connections are operational	3 days	P1
3	Review application logs to identify any errors or exceptions during test execution	5 days	P2
4	Validate that the Kenya-specific revenue configuration and data setup are properly initialized	1 week	P2
5	Execute manual validation of the failed scenario to confirm the issue and gather additional diagnostics	1 week	P2
6	Engage development team to investigate and resolve the blocking defect before next test cycle	2 weeks	P3

KEY FINDINGS

1	Single UI automation test failed, resulting in 0% pass rate versus 90% target
2	Complete test failure indicates a blocking issue in the revenue management workflow
3	System unable to complete the automated validation scenario successfully
4	Critical functionality gap identified that prevents baseline revenue operations
5	Application behavior deviates from expected UI interaction patterns
