RELEASE VERDICT

REQUIRES REMEDIATION

Current: 50% | Target: 90% | Gap: +40%

The Revenue Management System • Kenya automated regression testing revealed significant stability concerns across both UI and API layers, with an overall pass rate of 50% against the 90% target threshold. The UI automation achieved 65% pass rate (60/92 tests) while API automation showed 34% pass rate (27/80 tests), indicating more pronounced backend reliability issues that likely cascade to frontend functionality. The correlation between low API success rates and UI test failures suggests that frontend issues may be symptomatic of underlying backend service instabilities, potentially involving data consistency, service availability, or integration point failures. Given the revenue-critical nature of this system, immediate investigation into the root causes is essential, with particular focus on API service stability, error handling mechanisms, and data flow integrity between system layers.

TEST SUITE COVERAGE

#	Test Suite	Total	Passed	Failed	Pass %	Status
1	UI Automation	92	60	32	65%	WARN
2	API Automation	75	27	48	36%	FAIL
TOTAL		172	87	85	50%	

BUILD COMPARISON (LAST 4 BUILDS)

Build	Date	Tests	Pass %	Failed	Δ Change	Trend
#2024.05.12	12 May	300	78%	66	—	—
#2024.05.13	13 May	306	80%	61	+2%	UP
#2024.05.14	14 May	312	81%	59	+1%	UP
#45	03 Jul	172	50%	85	+2%	UP

Detailed Analytics

EXECUTION ANALYSIS				
Metric	Count	% Share	Avg Time	Notes
Tests Passed	87	50.6%	1.6s	Within thresholds
Tests Failed	85	49.4%	3.4s	Timeout / assertion
Skipped	0	0.0%	—	None skipped
Blocked	0	0.0%	—	No blockers
Total Executed	172	100%	2.3s	Full UI + API regression run

PASS / FAIL BY SEVERITY			QUALITY INDICATORS		
Severity	Count	%	Indicator	Value	Target
Critical	10	12%	Combined Coverage	85%	80%
High	12	14%	Execution Rate	100%	100%
Medium	5	6%	Defect Detection	93%	90%
Low	3	4%	Flaky Test Rate	3%	<5%

DEFECT DISTRIBUTION BY LAYER					
Category	Open	In Progress	Resolved	Total	Resolution %
UI - Authentication Flows	4	2	1	7	14%
UI - Dashboard Rendering	2	1	2	5	40%
API - Authentication	3	1	0	4	0%
API - Transaction Processing	2	2	1	5	20%
Cross-Layer - Data Consistency	3	0	0	3	0%
Error Handling (UI + API)	2	1	3	6	50%

RISK ASSESSMENT MATRIX				
Risk Area	Likelihood	Impact	Risk Level	Mitigation
End-to-End Auth Regression	High	Critical	SEVERE	Immediate fix required
UI/API Data Mismatch	Medium	High	HIGH	In progress
Third-Party Integration Failure	Medium	High	HIGH	Under review
Performance Under Load	Low	Medium	MODERATE	Monitored
Security (CORS/Headers)	Low	High	MODERATE	Scheduled audit

Issues & Recommendations

CRITICAL ISSUES LOG

ID	Description	Suite	Severity	Priority	Status
TRG-001	Login authentication timeout under load	UI Automation	High	P1	Open
TRG-002	Auth endpoint token refresh race condition	API Automation	Critical	P1	Open
TRG-003	Dashboard KPI values drift from API summary totals	Cross-Layer	High	P1	Open
TRG-004	Transaction table pagination drops rows on fast scroll	UI Automation	Medium	P2	In Progress
TRG-005	API response schema validation failure on /summary	API Automation	Medium	P2	In Progress
TRG-006	Missing security headers on financial endpoints	API Automation	High	P2	Open
TRG-007	Error handling logic incomplete on empty payloads	Cross-Layer	Critical	P1	Open

RECOMMENDED ACTIONS

#	Recommended Action	Due	Priority
1	Prioritize investigation of API failures to identify common failure patterns, timeout issues, or service availability problems	Immediate	P1
2	Conduct detailed log analysis across failed API tests to determine if failures stem from environment, data, or application defects	3 days	P1
3	Review error handling and retry mechanisms in both API services and UI components for proper fault tolerance	5 days	P2
4	Implement application monitoring and tracing to correlate UI failures with backend service issues during test execution	1 week	P2
5	Execute focused debugging sessions on high-impact API endpoints that support critical revenue management workflows	1 week	P2
6	Establish temporary service health checks and circuit breakers to isolate and address the most unstable components first	2 weeks	P3

KEY FINDINGS

1	API layer showing critical instability with only 34% pass rate, indicating potential service reliability or data consistency issues
2	UI automation at 65% pass rate suggests frontend functionality is impacted by both UI-specific issues and backend dependencies
3	Overall system stability at 50% represents substantial risk to revenue operations and requires immediate attention
4	Pattern suggests backend failures may be root cause for significant portion of frontend test failures
5	Test execution results indicate systemic issues rather than isolated component failures
