RELEASE VERDICT

REQUIRES REMEDIATION

Current: 0% | Target: 90% | Gap: +90%

The Revenue Management System Kenya backend API testing reveals critical system-wide issues with a 0.87% pass rate (1/115 tests passing) against the 90% target. The extensive failure pattern across both API automation (1/76 passed) and smoke validation suites (0/39 passed) indicates fundamental backend service disruptions rather than isolated endpoint failures. The single passing test suggests the test infrastructure is operational but the backend system is experiencing widespread service unavailability, configuration issues, or deployment problems that prevent normal API operations. This represents a complete backend system failure requiring immediate investigation and remediation before the system can be considered operational.

Issues & Recommendations

CRITICAL ISSUES LOG

ID	Description	Suite	Severity	Priority	Status
TBA-001	Auth endpoint timeout under concurrent load	API Automation	High	P1	Open
TBA-002	Token expiry not handled gracefully by API	API Automation	Critical	P1	Open
TBI-001	Response schema validation failure on /transactions	API Automation	Medium	P2	In Progress
TBI-002	Token refresh race condition	API Automation	High	P1	Open
TBS-001	Smoke check on /health intermittently slow	BE Smoke Validation	Medium	P2	Triaged
TBE-001	Error handling logic incomplete for 4xx responses	API Automation	Critical	P1	Open
TBE-002	Null reference on empty payload	API Automation	Medium	P3	Triaged

RECOMMENDED ACTIONS

#	Recommended Action	Due	Priority
1	Immediately verify backend service deployment status and health check endpoints	Immediate	P1
2	Review backend logs for critical errors, crashes, or configuration exceptions	3 days	P1
3	Validate database connectivity, authentication services, and external dependencies	5 days	P2
4	Check environment configuration settings and API gateway routing rules	1 week	P2
5	Perform manual backend service restart and validate core service initialization	1 week	P2
6	Execute progressive backend component validation starting with health checks before full suite retry	2 weeks	P3

KEY FINDINGS

1	99.13% API endpoint failure rate indicates system-wide backend service disruption
2	Complete smoke test suite failure (0/39) suggests core backend services are non-operational
3	Single passing test confirms test connectivity but reveals pervasive backend malfunction
4	Backend system appears to be in a non-functional state across all tested components
5	Failure pattern consistent with deployment, configuration, or infrastructure issues
