RELEASE VERDICT

REQUIRES REMEDIATION

Current: 30% | Target: 90% | Gap: +60%

The Revenue Management System Kenya backend API testing reveals significant stability concerns with a 30% overall pass rate against the 90% target, indicating substantial issues with endpoint reliability and response correctness across both API automation (27.5% pass rate) and smoke validation (33% pass rate) suites. The widespread failure pattern across 113 tests suggests systemic backend issues rather than isolated defects, potentially involving service availability, data consistency, authentication mechanisms, or response format compliance. The low pass rates in both test categories indicate that core backend functionality requires immediate attention to establish baseline stability before the system can be considered production-ready.

RECOMMENDED ACTIONS

#	Recommended Action	Due	Priority
1	Conduct immediate backend service health assessment to identify root causes of widespread endpoint failures	Immediate	P1
2	Prioritize stabilization of critical API endpoints showing highest failure rates in smoke validation suite	3 days	P1
3	Review backend error logs and response patterns to identify common failure modes across the 113 failed tests	5 days	P2
4	Implement enhanced backend monitoring and logging to capture detailed failure context for rapid diagnosis	1 week	P2
5	Establish backend service recovery plan focusing on achieving 50% pass rate milestone before targeting 90%	1 week	P2
6	Deploy incremental backend fixes with continuous validation against existing test suites to track improvement	2 weeks	P3

KEY FINDINGS

1	Backend API endpoints demonstrate 70% failure rate across 168 automated tests, indicating critical stability issues
2	API automation suite shows 58 endpoint failures out of 80 tests, suggesting widespread service reliability problems
3	Smoke validation failures (59 out of 88) indicate core backend functionality is not meeting basic operational requirements
4	Consistent failure patterns across both test suites point to systematic backend service issues rather than isolated defects
5	Current backend performance falls 60 percentage points below the 90% target pass rate threshold
