RELEASE VERDICT

REQUIRES REMEDIATION

Current: 0% | Target: 90% | Gap: **+90%**

The Revenue Management System Kenya backend API testing reveals critical system-wide failures with only 1 of 115 tests passing (0.87% pass rate), significantly below the 90% target. The comprehensive failure pattern across both API Automation suite (1/76 passed) and Backend Smoke Validation suite (0/39 passed) indicates fundamental backend service issues rather than isolated endpoint problems. The near-total failure rate suggests systemic infrastructure, configuration, or deployment issues affecting the entire API layer, requiring immediate investigation of core backend services, database connectivity, authentication mechanisms, and environment configuration before the system can be considered operational.

TBE-002	Null reference on empty payload	API Automation	Medium	P3	Triaged

RECOMMENDED ACTIONS

#	Recommended Action	Due	Priority
1	Verify backend service deployment status and confirm all microservices are running correctly	Immediate	P1
2	Check database connectivity and validate connection strings across all environments	3 days	P1
3	Review API gateway configuration and ensure proper routing to backend services	5 days	P2
4	Validate authentication/authorization services and token generation mechanisms	1 week	P2
5	Examine backend logs to identify root cause of widespread endpoint failures	1 week	P2
6	Conduct manual health checks on critical API endpoints to isolate infrastructure versus code issues	2 weeks	P3

KEY FINDINGS

1	99.1% backend test failure rate indicates system-wide API unavailability or misconfiguration
2	Complete failure of smoke validation tests suggests core backend services are non-operational
3	Single passing test among 115 indicates backend infrastructure is minimally responsive
4	Failure pattern spans multiple test suites pointing to fundamental service layer issues
5	Backend system currently unable to meet basic operational requirements for revenue management
