RELEASE VERDICT

REQUIRES REMEDIATION

Current: 64% | Target: 90% | Gap: +26%

The Revenue Management System for Kenya completed automated UI testing with 91 total test cases, achieving a 64% pass rate (59 passed, 32 failed) against the target threshold of 90%. This 26-point gap from the target indicates significant functional issues within the application that require immediate attention. The test execution revealed that approximately one-third of the system's UI functionalities are not performing as expected, suggesting potential defects in the application code, integration points, or environmental configurations that need to be addressed before the system can be considered stable for production use.

RECOMMENDED ACTIONS

#	Recommended Action	Due	Priority
1	Prioritize analysis of the 32 failed test cases to identify common failure patterns and root causes	Immediate	P1
2	Conduct immediate debugging sessions focused on the most critical revenue management functions	3 days	P1
3	Review application logs and error messages to isolate defects in the system code	5 days	P2
4	Implement fixes for identified defects and prepare for regression testing cycles	1 week	P2
5	Verify environment configurations and data dependencies that may impact UI functionality	1 week	P2
6	Schedule follow-up test execution after defect remediation to validate improvements toward 90% target	2 weeks	P3

KEY FINDINGS

1	System achieved 64% pass rate, falling 26 points short of the 90% target threshold
2	32 out of 91 UI test cases failed, indicating substantial functional defects in the application
3	59 test cases passed successfully, demonstrating that core functionalities are partially operational
4	The failure pattern suggests systemic issues affecting multiple areas of the revenue management workflows
5	Current application stability level poses risks for production deployment
