RELEASE VERDICT

REQUIRES REMEDIATION

Current: 30% | Target: 90% | Gap: +60%

The Revenue Management System Kenya backend API testing reveals significant stability concerns with a 30% overall pass rate across 168 tests, substantially below the 90% target threshold. The API Automation suite shows particularly low reliability at 27.5% pass rate (22/80), while Backend Smoke Validation performs marginally better at 33% (29/88), indicating widespread endpoint instability and response inconsistencies across the system. The high failure rate suggests systemic issues with the backend implementation that require immediate investigation and remediation to ensure the revenue management capabilities meet operational requirements for the Kenya deployment.

RECOMMENDED ACTIONS

#	Recommended Action	Due	Priority
1	Conduct immediate root cause analysis on the most frequently failing endpoints to identify common failure patterns	Immediate	P1
2	Review backend service logs and monitoring data to isolate infrastructure versus application-level issues	3 days	P1
3	Prioritize stabilization of critical revenue processing endpoints that impact core business operations	5 days	P2
4	Implement enhanced error handling and retry mechanisms in backend services to improve resilience	1 week	P2
5	Verify all service dependencies, database connections, and external integrations are properly configured	1 week	P2
6	Establish incremental stability milestones targeting 50%, 70%, then 90% pass rates with focused remediation sprints	2 weeks	P3

KEY FINDINGS

1	Backend endpoints demonstrate 70% failure rate across both API automation and smoke validation suites
2	API Automation suite exhibits critical instability with only 22 of 80 endpoints responding correctly
3	Smoke validation failures (59 of 88) indicate fundamental backend service reliability issues
4	Current system performance falls 60 percentage points below the 90% target pass rate
5	Widespread failures suggest potential infrastructure, configuration, or service dependency problems
