RELEASE VERDICT

REQUIRES REMEDIATION

Current: 47% | Target: 90% | Gap: +43%

The Revenue Management System Kenya regression suite completed with 172 tests achieving a 47% pass rate (82 passed, 86 failed), significantly below the 90% target threshold. The test results indicate systemic issues across both UI and API layers, with UI automation showing 65% pass rate (60/92) and API automation at 28% pass rate (22/80). The notably lower API pass rate suggests fundamental backend stability issues that are likely cascading to impact frontend functionality, as UI components depend on reliable API responses for data operations and state management. The correlation between backend failures and frontend test results points to critical service layer defects that require immediate attention to restore system stability and ensure reliable revenue management operations.

RECOMMENDED ACTIONS

#	Recommended Action	Due	Priority
1	Prioritize API defect triage focusing on the 58 failed API tests to identify common failure patterns and root causes	Immediate	P1
2	Implement backend service monitoring and logging enhancements to capture detailed failure diagnostics	3 days	P1
3	Execute targeted debugging sessions on critical API endpoints showing highest failure rates	5 days	P2
4	Establish temporary API response validation and retry mechanisms to improve system resilience	1 week	P2
5	Create defect heat map correlating UI failures with specific API dependencies for systematic resolution	1 week	P2
6	Schedule focused stabilization sprint addressing top 10 high-impact backend services before next regression cycle	2 weeks	P3

KEY FINDINGS

1	API layer showing critical instability with only 28% pass rate indicating severe backend service issues
2	UI automation at 65% pass rate suggests frontend functionality compromised by underlying service failures
3	Overall system reliability at 47% represents significant operational risk for revenue management processes
4	Backend API failures likely root cause for cascading frontend test failures due to data dependencies
5	43% regression from target pass rate indicates multiple system components require stabilization
