RELEASE VERDICT

REQUIRES REMEDIATION

Current: 30% | Target: 90% | Gap: +60%

The Revenue Management System Kenya backend API testing reveals significant reliability concerns with a 30% overall pass rate against a 90% target, indicating widespread endpoint instability and response issues across both API automation (27.5% pass rate) and smoke validation (33% pass rate) suites. The consistently low pass rates across both test categories suggest systemic backend service issues rather than isolated endpoint failures, with approximately 113 failing test cases providing substantial data points for root cause analysis. The backend infrastructure appears to be experiencing critical issues that affect core revenue management functionalities, requiring immediate technical intervention to restore system stability and ensure reliable API responses for downstream consumers.

RECOMMENDED ACTIONS

#	Recommended Action	Due	Priority
1	Conduct immediate triage of the 113 failing test cases to identify common failure patterns and prioritize critical endpoint fixes	Immediate	P1
2	Review backend service logs and monitoring data to identify infrastructure issues, timeout problems, or resource constraints	3 days	P1
3	Validate database connections, authentication services, and third-party integrations that may be causing cascading failures	5 days	P2
4	Implement incremental backend fixes starting with smoke test failures to restore core functionality first	1 week	P2
5	Set up enhanced API monitoring and logging to capture detailed failure context for faster resolution	1 week	P2
6	Establish daily backend stability reviews until pass rate reaches 75%, then continue optimization toward 90% target	2 weeks	P3

KEY FINDINGS

1	Backend services achieving only 30% reliability across 168 test scenarios versus 90% target threshold
2	API automation endpoints showing 72.5% failure rate indicating widespread service instability
3	Smoke validation failures at 67% suggest core backend functionalities are not meeting baseline operational requirements
4	Consistent failure patterns across both test suites point to systemic backend infrastructure or configuration issues
5	113 failing test cases provide comprehensive failure data for targeted backend debugging and remediation
