RELEASE VERDICT

REQUIRES REMEDIATION

Current: 47% | Target: 90% | Gap: +43%

The Revenue Management System Kenya regression suite completed with 163 tests executed, achieving a 47% pass rate (78 passed, 85 failed) against the 90% target threshold. The results indicate significant stability concerns across both application layers, with UI automation showing 67% pass rate (56/83) and API automation at 28% pass rate (22/80). The notably lower API success rate suggests fundamental backend service issues that are likely contributing to frontend failures, as UI functionalities typically depend on underlying API responses. The correlation between backend instability and frontend test failures points to systemic issues in the revenue management application's core services, data processing, or integration points that require immediate investigation to restore system reliability.

RECOMMENDED ACTIONS

#	Recommended Action	Due	Priority
1	Prioritize investigation of the 58 failed API endpoints to identify root causes in backend services	Immediate	P1
2	Analyze API error logs and response codes to categorize failure patterns and identify common failure points	3 days	P1
3	Verify database connectivity, data integrity, and transaction processing within the revenue management modules	5 days	P2
4	Review application integration points and external service dependencies for timeout or connection issues	1 week	P2
5	Conduct focused debugging sessions on critical revenue calculation and reporting workflows	1 week	P2
6	Implement temporary service health checks and monitoring to track system stability improvements during remediation	2 weeks	P3

KEY FINDINGS

1	API layer showing critical instability with only 28% pass rate indicates core backend service issues
2	UI automation at 67% pass rate suggests frontend functionality is partially impacted by backend failures
3	Overall system stability at 47% represents a 43 percentage point gap from the 90% target
4	High correlation between API failures and UI test failures indicates cascading dependency issues
5	Revenue management core functionalities appear compromised affecting both data processing and user interactions
