REQUIRES REMEDIATION

Current: 46% | Target: 90% | Gap: +44%

The Revenue Management System • Kenya regression suite completed with 163 total tests, achieving a 46% pass rate (76 passed, 74 failed) against the 90% target threshold. The test execution revealed significant stability concerns across both application layers, with UI automation achieving 65% pass rate (54/83) and API automation at 27.5% pass rate (22/80). The substantially lower API pass rate suggests potential backend service instabilities that may be cascading to impact frontend functionality, as UI components typically depend on underlying API responses for data rendering and state management. The correlation between backend failures and frontend issues indicates systemic integration challenges that require immediate investigation to restore application reliability and ensure revenue processing accuracy.

RECOMMENDED ACTIONS

#	Recommended Action	Due	Priority
1	Conduct immediate API endpoint health check and review server logs for timeout, connection, or data validation errors	Immediate	P1
2	Perform root cause analysis on the 58 API failures to identify common failure patterns or specific service degradation	3 days	P1
3	Review database connectivity and query performance metrics as potential contributors to API response failures	5 days	P2
4	Validate data integrity and schema compliance between frontend expectations and backend responses	1 week	P2
5	Implement API response monitoring and establish baseline performance metrics for critical revenue management endpoints	1 week	P2
6	Execute targeted manual verification of high-priority revenue calculation and reporting workflows while stabilization efforts proceed	2 weeks	P3

KEY FINDINGS

1	API layer showing critical instability with only 27.5% pass rate indicating potential service degradation or data consistency issues
2	UI automation pass rate of 65% suggests frontend components are experiencing failures possibly due to backend dependencies
3	Overall system stability at 46% pass rate represents significant deviation from 90% target, indicating widespread functional issues
4	High failure concentration in API layer (58 failures) points to backend services as primary area of concern
5	Pattern suggests cascading failures where API issues are propagating to UI layer functionality
