RELEASE VERDICT

REQUIRES REMEDIATION

Current: 45% | Target: 90% | Gap: +45%

The Revenue Management System • Kenya automated UI test suite executed 75 tests with a 45% pass rate (34 passed, 41 failed), indicating significant functional gaps in the application under test compared to the 90% target threshold. The high failure rate suggests systemic issues within the revenue management application that require immediate attention, particularly around UI stability, data handling, and workflow consistency. The test results reveal that critical revenue processing functionalities are not meeting expected behavioral specifications, which could impact business operations and revenue collection processes. Priority should be given to stabilizing the core application features and addressing the root causes of the failures to ensure the system meets operational requirements for revenue management in the Kenya market.

RECOMMENDED ACTIONS

#	Recommended Action	Due	Priority
1	Conduct root cause analysis on the 41 failed test scenarios to identify common failure patterns	Immediate	P1
2	Prioritize fixing high-impact revenue calculation and processing features first	3 days	P1
3	Implement application-level logging and monitoring to capture failure points in real-time	5 days	P2
4	Schedule focused debugging sessions with development team to address UI responsiveness issues	1 week	P2
5	Create a defect remediation plan categorizing failures by severity and business impact	1 week	P2
6	Establish interim manual validation procedures for critical revenue workflows until stability improves	2 weeks	P3

KEY FINDINGS

1	Application stability issues with 41 out of 75 UI workflows failing to complete successfully
2	45% pass rate falls significantly below the 90% target, indicating widespread functional defects
3	Revenue management core features exhibit inconsistent behavior during automated validation
4	UI components and data processing workflows require stabilization across multiple modules
5	System readiness for production deployment requires substantial improvement in functionality
