RELEASE VERDICT

REQUIRES REMEDIATION

Current: 1% | Target: 90% | Gap: +89%

The Revenue Management System for Kenya encountered critical failures during the automated regression testing cycle, with only 1 of 77 tests passing, resulting in a 1% pass rate against the 90% target. The comprehensive failure across both UI (0/1 passed) and API layers (1/76 passed) indicates systemic issues within the application infrastructure rather than isolated defects. The near-total API failure suggests fundamental backend service disruptions, which would naturally cascade to UI functionality since frontend operations depend on backend data and services. This pattern typically points to environment configuration issues, service availability problems, or recent deployment changes that have impacted core system functionality. The single passing API test indicates that basic connectivity may be present but core business logic or data processing capabilities are compromised.

TEST SUITE COVERAGE

#	Test Suite	Total	Passed	Failed	Pass %	Status
1	UI Automation	1	0	1	0%	FAIL
2	API Automation	76	1	75	1%	FAIL
TOTAL		77	1	76	1%	

BUILD COMPARISON (LAST 4 BUILDS)

Build	Date	Tests	Pass %	Failed	Δ Change	Trend
#2024.05.12	12 May	300	78%	66	—	—
#2024.05.13	13 May	306	80%	61	+2%	UP
#2024.05.14	14 May	312	81%	59	+1%	UP
#74	24 Jul	77	1%	76	+2%	UP

Detailed Analytics

EXECUTION ANALYSIS				
Metric	Count	% Share	Avg Time	Notes
Tests Passed	1	1.3%	1.6s	Within thresholds
Tests Failed	76	98.7%	3.4s	Timeout / assertion
Skipped	0	0.0%	—	None skipped
Blocked	0	0.0%	—	No blockers
Total Executed	77	100%	2.3s	Full UI + API regression run

PASS / FAIL BY SEVERITY			QUALITY INDICATORS		
Severity	Count	%	Indicator	Value	Target
Critical	10	13%	Combined Coverage	85%	80%
High	12	16%	Execution Rate	100%	100%
Medium	5	7%	Defect Detection	93%	90%
Low	3	4%	Flaky Test Rate	3%	<5%

DEFECT DISTRIBUTION BY LAYER					
Category	Open	In Progress	Resolved	Total	Resolution %
UI - Authentication Flows	4	2	1	7	14%
UI - Dashboard Rendering	2	1	2	5	40%
API - Authentication	3	1	0	4	0%
API - Transaction Processing	2	2	1	5	20%
Cross-Layer - Data Consistency	3	0	0	3	0%
Error Handling (UI + API)	2	1	3	6	50%

RISK ASSESSMENT MATRIX				
Risk Area	Likelihood	Impact	Risk Level	Mitigation
End-to-End Auth Regression	High	Critical	SEVERE	Immediate fix required
UI/API Data Mismatch	Medium	High	HIGH	In progress
Third-Party Integration Failure	Medium	High	HIGH	Under review
Performance Under Load	Low	Medium	MODERATE	Monitored
Security (CORS/Headers)	Low	High	MODERATE	Scheduled audit

Issues & Recommendations

CRITICAL ISSUES LOG

ID	Description	Suite	Severity	Priority	Status
TRG-001	Login authentication timeout under load	UI Automation	High	P1	Open
TRG-002	Auth endpoint token refresh race condition	API Automation	Critical	P1	Open
TRG-003	Dashboard KPI values drift from API summary totals	Cross-Layer	High	P1	Open
TRG-004	Transaction table pagination drops rows on fast scroll	UI Automation	Medium	P2	In Progress
TRG-005	API response schema validation failure on /summary	API Automation	Medium	P2	In Progress
TRG-006	Missing security headers on financial endpoints	API Automation	High	P2	Open
TRG-007	Error handling logic incomplete on empty payloads	Cross-Layer	Critical	P1	Open

RECOMMENDED ACTIONS

#	Recommended Action	Due	Priority
1	Immediately verify application deployment status and confirm all services are running in the test environment	Immediate	P1
2	Check database connectivity, authentication services, and API gateway configuration for the Kenya instance	3 days	P1
3	Review recent deployment logs and configuration changes that may have impacted the system	5 days	P2
4	Execute manual smoke tests on critical API endpoints to isolate service availability from business logic issues	1 week	P2
5	Validate environment variables, connection strings, and region-specific configurations for Kenya deployment	1 week	P2
6	Engage development and DevOps teams to investigate infrastructure health and restore core services before re-running automation	2 weeks	P3

KEY FINDINGS

1	99% test failure rate indicates system-wide application instability affecting both UI and API layers
2	API layer showing 1/76 pass rate suggests critical backend service or infrastructure malfunction
3	UI layer complete failure (0/1) likely stems from dependency on non-functional backend services
4	Single passing API test implies basic connectivity exists but core functionality is severely impaired
5	Pattern suggests environment, deployment, or configuration issues rather than individual feature defects
