RELEASE VERDICT

REQUIRES REMEDIATION

Current: 39% | Target: 90% | Gap: +51%

The Revenue Management System for Kenya shows significant functional issues with only 36 of 91 automated UI tests passing, achieving a 39% pass rate against the 90% target. This substantial gap of 51 percentage points indicates widespread system instability affecting multiple functional areas of the application. The high failure rate suggests that critical revenue management workflows may be experiencing defects that could impact business operations, user experience, and data integrity. The system requires immediate technical investigation and remediation to identify root causes of the failures, prioritize fixes based on business impact, and establish a path toward achieving the target stability threshold.

RECOMMENDED ACTIONS

#	Recommended Action	Due	Priority
1	Conduct immediate triage of all 55 failed tests to categorize by severity and business impact	Immediate	P1
2	Identify common failure patterns across test results to locate systemic issues in the application	3 days	P1
3	Prioritize fixing high-impact revenue calculation and transaction processing defects first	5 days	P2
4	Implement application logging enhancements to improve root cause analysis capabilities	1 week	P2
5	Establish daily defect review sessions between development and stakeholders until 70% pass rate achieved	1 week	P2
6	Create a phased remediation plan with incremental pass rate targets of 60%, 75%, then 90%	2 weeks	P3

KEY FINDINGS

1	System achieving only 39% test pass rate with 55 failed tests out of 91 total
2	51 percentage point gap from the 90% target indicates substantial application instability
3	Multiple functional areas of the revenue management system appear to be affected
4	Current system state poses risks to revenue operations and user workflows
5	Application requires comprehensive defect resolution before production readiness
