RELEASE VERDICT

REQUIRES REMEDIATION

Current: 1% | Target: 90% | Gap: +89%

The Revenue Management System for Kenya is currently experiencing critical system-wide failures affecting both UI and API layers, with only 1 out of 77 regression tests passing (1% pass rate versus 90% target). The comprehensive failure pattern across both frontend and backend components suggests fundamental system instability, likely stemming from core service disruptions, configuration issues, or environmental problems rather than isolated feature defects. The single passing API test indicates the system retains minimal connectivity but lacks functional integrity across business operations. The complete UI automation failure coupled with near-total API failures points to cascading issues where backend service disruptions are preventing proper frontend initialization and operation, creating a system-wide outage condition that requires immediate technical intervention.

RECOMMENDED ACTIONS

#	Recommended Action	Due	Priority
1	Immediately verify system health checks for database connections, service endpoints, and authentication services	Immediate	P1
2	Review recent deployment logs and configuration changes to identify potential breaking changes	3 days	P1
3	Execute manual smoke tests on core revenue management workflows to validate basic system availability	5 days	P2
4	Analyze application and server logs from the test execution timeframe to identify error patterns and root causes	1 week	P2
5	Verify environment-specific configurations including API endpoints, credentials, and integration points	1 week	P2
6	Coordinate with infrastructure team to confirm all dependent services and microservices are operational	2 weeks	P3

KEY FINDINGS

1	System exhibits 99% failure rate with only 1 API test passing out of 77 total regression tests
2	Complete UI layer failure suggests frontend cannot establish proper communication with backend services
3	API layer showing 1/76 pass rate indicates core service availability issues or data layer disruptions
4	Failure pattern consistency across layers points to environmental, deployment, or configuration root causes
5	Single passing API test demonstrates basic system connectivity exists but functional capabilities are compromised
